

RAHUL TOMAR

"Web Developer"

✉ rahul.tomar.dzire045@gmail.com ☎ +91-8191069018 🌐 [rahul-t0mar](#)

PROFILE

Built a React component which help in rating movies, products etc. available on the npm library. Also built a fully optimized and responsive use-Popcorn application which help rate the movies. Optimized a sporcle game which uses states of India. Solved 100+ Leetcode problems. Used Docker to create node.js projects which keep the project safe from all the system and other updates which might cause bugs or issues.

SKILLS

- **HTML, HTML5, CSS, CSS3, Tailwind CSS, Responsive Web Design**
- **JavaScript** (ES6+, Function, Hoisting, Prototypes and Inheritance, OOP(Object Oriented Programming), Functional Programming, Arrow Function, Destructuring, Spread and Rest Operators, Modules, Async/Await, Promises)
- **Data Structures** (Array and Array Methods, Objects, Sets and Maps, JSON Handling)
- **DOM and Browser APIs** (DOM Manipulation, Event Handling, Browser APIs, Local Storage and Session Storage)
- **Backend :- Node.js** (Express.js, Middleware, RESTful API development, Authentication and Authorization using JWT, CRUD Operations, Error Handling, Dotenv, Cors, bcrypt, Passport, Strategy)
- **Frontend :- React.js** (Props and State Management, JSX, ReactHooks(useState, useEffect, useRef, useContext), Custom React Hooks, Component Lifecycle, Conditional Rendering, React-Router, Event Handling, Context API, API Integration, Reusable Component Development, Performance Optimization)
- **Vue.js**(Vue Directives, Event Handling, Conditional Rendering, Props and Emits, API Integation, Life cycle Hooks,)
- **Databases :-** MongoDB, MySQL, PostgreSQL, Data Modeling, SQL queries, Database Design, Indexing, Aggregation Framework, Joining databases
- **Tools and Technologies :-** NPM, Nodemon, Postman, VS Code, **Git**, Github, VS Code, PGAdmin4, MongoDB Atlas, Vite, ESLint, React and Vue Developer Tools, Render, Vercel, Code SandBox, LeetCode.

Other Skills:- Python - Pandas, Flask, Django, Web Scrapping with BeautifulSoup and Selenium, automation, Tkinter, Customtkinter, List and Dictionary and their comprehensions.

EXPERIENCE

Awesome Star Rating (React npm package):-

- It is star react rating component which can be used by anybody in their project by importing the component from the npm library.
- It is highly customizable with the ability to change the number of stars, the color of the stars, displaying the number of stars rated, size of the stars.
- It can be used to rate anything on the React Project such as movies, products, etc.
- The complete code is available on the Github. Link :- <https://github.com/rahul-t0mar/star-rating-react-component>
- The npm library page is available on the npm website. Link :- <https://www.npmjs.com/package/awesome-star-rating>

Use Popcorn :-

- Contains the list of movies rated by the user along with the rating on the IMDB.
- Used the useState, useEffect and useRef to update the values in the real time.
- Used the Custom Hooks and the reusable components with the React Library.
- The API used is OIMDB to fetch the movie when user searches the name of the movie. Also displays the name of directors, actors, etc from the fetched data.
- Can be used to rate the movies user has watched and the data is stored in the browser using cookies which don't the refresh delete the user data if user wants to rate another movie. The UI also show the IMDB rating along with names of directors and duration of the movies.
- The complete code is available on the Github. Link :- <https://github.com/rahul-t0mar/use-popcorn>
- This website is hosted on Vercel. To see the live preview go to <https://movie-list-bay-chi.vercel.app>

To-do List with MERN :-

- It is about creating a To-do list where user can create, update, delete and read the previous To-do list items.
- Store that data items and the changes to the database.
- Used the Node.js for the back-end. Authentication and Authorization using the JWT so that every user has its own unique list of to-dos.
- Express.js as the middleware along with Cors.
- Async/Await for the promises in asynchronous tasks for the CRUD Operations.
- RESTful API to connect with the database and front-end.
- Used the React.js for the front-end with the use React Hooks such as useState, useRef and useEffects. Also used custom hooks for the project.
- Added the light and dark mode too with website being super interactive.
- To experience it locally open the code in any coding software. cd backend and run the command npm run dev. Open a new terminal without closing the backend and cd frontend. Here again run npm run dev. Go to the link in the terminal and sign in if you already have an account or signup if you are a new user. Create a todolist. Logout and login again to see the item still in the list.
- The code for the project is <https://github.com/rahul-t0mar/mern-project>

Amazon website clone :-

- This project is built using vanilla JavaScript without using any framework with HTML and CSS designing the UI.
- Created multiple pages along with Navbar which has functionality to updating cart notification number with items added or removed from cart.
- Used DOM to manage and update the UI for each part of the project.
- Used Jasmine Test to test for all the possible scenarios in the project from basic test to advanced tests.
- The webpage is hosted on the vercel :- <https://amazon-clone-website-eta-cyan.vercel.app/>

Lisper Project:-

- A Node.js project where one can read and post secrets anonymously .
- Used the ejs (embedded JavaScript) files to create the project.
- The code is available on Github at <https://github.com/rahul-t0mar/secret-project>
- The final render of this project is available on Render at <https://secret-project-051c.onrender.com>

EDUCATION

B.Sc. in Physics, Chemistry and Mathematics Digamber Jain College	2014-2017
M.A. in Mathematics Himalayan Garhwal University	2019-2021
High School (ICSE Board) Christu Jyothi Convent Sr. Sec. School	Baraut, Uttar Pradesh
Intermediate (ISC Board) Christu Jyothi Convent Sr. Sec. School	Baraut, Uttar Pradesh

COURSES

The Complete Full Stack Web Development Bootcamp Udemy- Online	2025
The Ultimate React Course Udemy - Online	2026
The Complete Nodejs Course Udemy - Online	2026
The Complete Nodejs Course Udemy - Online	2026
The Complete Python Bootcamp Udemy - Online	2025

Strenghts

- Developed and deployed 20+ personal web projects using modern web technologies.
- Hosted projects using Github, Vercel and Render.
- Stored and retrieved data from the databases such as PostgreSQL, MongoDB, etc
- Maintained clean and clear code practices using Git and version control workflows.
- Learned and applied Node.js, React.js and PostgreSQL/MongoDB to build full stack web applications.
- Designed responsive and user-friendly interfaces with HTML, CSS and JavaScript with frameworks like Node.js, React.js, Vue.js, etc
